# **TV White Space:** Trends and Opportunities for Smart City development

An A\*STAR spin-off company

Connecting 3B people and 50B devices thru' dynamic spectrum sharing technique

Pankaj Sharma Co-Founder & CTO

pankaj@whizpace.com

http://www.whizpace.com

### Outline

- Smart City Concept
- Singapore as Smart Nation
- Issues with current spectrum allocation
- TV White Space (TVWS)
- TVWS as Enabler for Smart City
- Summary

### Mega-trends that lead to Smart City

*Quote from IEEE*: As world urbanization continues to grow and the total **population expected to double by 2050**, there exists an increased demand for intelligent, sustainable environments that reduce environmental impact and offer citizens a high quality life. A smart city brings together technology, government and society to enable the following characteristics:

- By 2050, half the world will move into cities. Digital revolution is redefining the economic and social structure of the world
- Numerous cities aspiring to become smart cities digitally connected cities that break down the siloes between governments, businesses and citizens to enable better quality of life.

# Features of smart city/ IoT/ IoE

#### What are the GLOBAL CHALLENGES?

Urban Density Two-thirds of the world will live in cities by 2050.

Ageing Population The world is ageing fast. By 2050, more than 2 billion people will be over 60.

Healthcare By 2025, there will be 8 billion people, 800 million of whom will be over 65 with high health needs.

#### Mobility

People are moving more into congested centres, with urban travel to triple by 2050. Traffic congestion could bring cities to a standstill.

Energy Sustainability Global demand for energy will rise by up to 37% by 2035.

# **Possibilities of Smart Nation**

#### HEALTHCARE

Tele-monitoring using wearable devices, assistive technologies for the disabled and elderly

#### INTEGRATED PUBLIC SERVICES

Unified mobile app for feedback and incident reporting

#### INTEGRATED CITY PLANNING

Analytics-driven provisioning of facilities and services

#### **URBAN LIVING**

Smart home technologies to reduce utility bills, environmental monitoring for outdoor public spaces

#### **URBAN MOBILITY**

Demand-responsive public transport system, self-driving vehicles

#### SAFETY AND SECURITY

Real-time video surveillance and analytics for improved public safety, early flood warning, faster emergency response

# Some of the smart solutions in Singapore

#### Smartbins installed at parks

Next generation port

# Some of the smart solutions in Singapore

• Solve the challenge of the last **500 meters** 

- Take the commuter from doorstep to the underground station or bus interchange
- Operator-less lift to **driverless cars**

Automatic Vehicle

- Address manpower challenges and **productivity** issues in **manufacturing**
- Waiters to serve food and beverages in restaurants

Robots

- Meet the future of street lighting!
  - Solar powered lamps
  - WiFi AP
  - Equipped with cameras and environmental sensors
  - Provide video feed, street lighting and other traffic related information
    - EV Charging & Adaptive lighting
  - **Smart Street lights** 
    - Wearables moving into business and factory environment
    - Alzheimer's and wanders off
    - IoT machines are feeding live data into the enterprise
    - **Glasses** are high performing way to do it

Wearables

### Exponential growth in wireless resulted in Spectrum Crunch

### **TVWS** is the Answer for Scarce Spectrum

#### Dr Ibrahim unveils regulations for TV White Spaces in S'pore Announcing the r

Above: Minister for Communications and Information Dr Yaacob Ibrahim

Singapore is the 2<sup>nd</sup> country in the world, after USA, to approve regulation for TVWS

Announcing the new Masterplan 2025, Minister for Communications and Information Yaacob Ibrahim said the idea will help the nation cope with <u>scarce wireless</u> <u>spectrum</u> amidst rising demand for mobile Internet access.

Except from IMM2025: Some companies have already made some inroads. For example, the Institute for Infocomm Research recently designed a prototype for spectrum detection. This was later developed and commercialised with local firm Power Automation.

Through the introduction of the **TV White Space regulatory framework**, an estimated 189 MHz of spectrum will be made available for TV White Space operation.

Dr Ibrahim said it is expected to result in greater capacity and data connectivity for wireless broadband internet access.

### Current way of using spectrum is inefficient $\rightarrow$ <u>Opportunities</u>

Spectrum allocation ~100%

Spectrum utilization ~6.5%

Analog to digital TV migration frees up large chunk of spectrum

New way of accessing spectrum in a shared manner

### → Sharing economy

 $\rightarrow$  Radical shift in communication industry

# Key Benefits & Applications of TVWS

# A Global Momentum: Worldwide Regulations

# TVWS filling the gap for IoT!

# 3G HSPA vs. TVWS

Factors	3G HSPA	TVWS	
Price (US\$/month)	40	0	
Max. speed <sup>#</sup> (Mbps)	4.8 (DL), 1.3 (UL)##	13.5	
Max speed at cell edge (Mbps)	0.6	1.5	
Worst number of simultaneous QVGA 15 fps video streams uploads (assume 250 kbps)	2	6	
Number of simultaneous 5 MHz frequency channels (assume 10)	1	10###	
Potential worst-case max number of simultaneous QVGA 15 fps per network <sup>####</sup>	2	60	
Public Network (3G/4G) Private Network (TVWS) Capex Ca	Notes: #Based on Singtel: <u>http://home.singtel.com/bbmobile/</u> ##Uplink (UL) speed is estimated based on downlink speed ###IDA's current TVWS framework has 24 channels available ####The actual numbers should be higher as it is unlikely that all devices will be at cell edge

Wireless Gateway Node

Powerful long-range back-haul wireless link, e.g. TV White Space ---------

### Conclusions

Smart city requires good communication infrastructure especially wireless communications

Cellular-based communications is not fully suited for smart city applications

TVWS which has range and penetration benefits, is able to better utilize the scarce spectrum resources

TVWS has been proven in several smart city applications. You could also benefit from it!

FCC then Chairman Kevin Martin: "Opening the white spaces... will have access to devices and services that they may have only <u>dreamed</u> about before."
